

# WAREHOUSE STRIPING

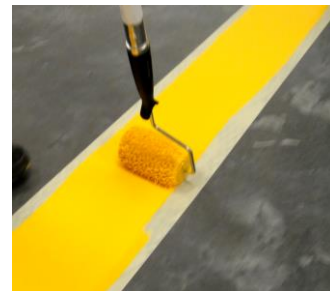

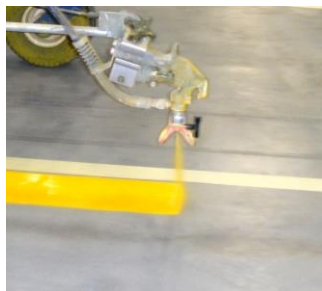

By the warehouse identification & marking specialists

ASG Services warehouse striping and walkway solutions cover a wide range of needs for indoor applications. Design, durability, and budgetary aspects are discussed during consultations with our customers and brought together in plans and diagrams so working models can be considered and approved prior to installation.

As the industry benchmark, we believe we are unique, in offering a complete solution in-house from conceptual design, solution development, drawings, and scheduling, through to installation, all to help optimize customer operations.

Warehouse striping installations vary in cost, based on the method of concrete preparation and paint system to be used. Typically, the lower durability options are quicker to apply and so cheaper, the more durable methods are therefore considered an investment. ASG Services work with customers to create a mix of solutions to remain within budgets.

## Additional information:

- Full consultation and planning,
- Weekend/night installations available to minimize disruption,
- Options available for chemical resistance,
- Can be cleaned using conventional methods.

ASG Services provide painted, taped, and illuminated options, ask us about their benefits.
